Miras Mujeeb

Forward Deployed Engineer
miraspk98@gmail.com · +49 1575 4335532 · linkedin.com/in/miras98 · miras-dev.com · Open to on-site in Germany and remote

SUMMARY

Forward deployed engineer who embeds with customers, learns how their business works, and turns ambiguous problems into production workflows, integrations and automation they can run themselves. Builds n8n automations (including an AI support agent) and production integrations across payment, OAuth and event-driven AWS systems. Turns repeated client requests into reusable tooling, so each deployment ships faster than the last.

EXPERIENCE

Forward Deployed Software Engineer (Co-Founder) Dec 2025 - Present
Azolute AI Technologies, India

- Embed with clients as sole technical lead: learn how the business works, turn ambiguous problems into a scoped design, then build, deploy and maintain the system that fits it.
- Delivered 10+ websites, 5+ apps and 3+ products end to end, including RetroBooth, a Flutter souvenir photo app for a client in Germany, shipped in two weeks.
- **ClashCWL / Legend Smash** (flagship product, Aug 2026 - Present, founder and sole engineer): subscription platform on an event-driven serverless AWS backend (Lambda, DynamoDB, S3, CloudFront, EventBridge, SES) with 50+ modules and 500+ automated tests; automated scouting saves clan leaders 10-15 hours a week.
- Production integrations built from scratch: billing across Paddle, PayPal and Razorpay (UPI) with country routing; Discord app with OAuth, slash commands, role linking and real-time DM alerts; three branded sites from one multi-tenant codebase via per-client config.
- Daily data pipeline analysing ~267,000 attacks a week from the top 5,000 players; self-running QA pipeline with one-click release via Discord buttons; 730+ commits and 200+ merged PRs in 3 months.
- Build n8n workflow automations for clients, including an AI website support agent, plus an MCP server that lets an LLM draft, validate and save game bases against a rule engine; turn recurring client patterns into reusable tooling that speeds up each new deployment.

Software Engineer & Founding Team Member Jul 2023 - Sep 2025
Dview Technologies, Bengaluru

- Worked directly with founders on product, clients and delivery; rebuilt the website and platform about four times as the business repositioned roughly every three months.
- Integrated services from 4-5 senior backend engineers into shipped product, aligning APIs between front-end and backend.
- Built real-time LLM streaming interfaces (Server-Sent Events, custom React hooks) for Mirage (Dsense), an enterprise data analytics and AI chat platform; led front-end.

Technical Reviewer (Part-time) Jul 2023 - Present
Brototype, Kochi

- Run live 1:1 technical reviews for students in a 24-week full-stack program: review code, question understanding, score and decide who advances.

Earlier roles Jul 2022 - Jul 2023
Bengaluru

- UI/UX Developer, Fabits (Nov 2022 - Jul 2023): designed goal-based investment flows for a fintech app.
- Full Stack Engineer, Bask (Jul 2022 - Nov 2022): built an e-learning platform with built-in social features.

SKILLS

Automation & integrations: n8n, REST APIs, Discord OAuth, Google Identity, event-driven systems (AWS EventBridge), Paddle, PayPal, Razorpay, Twilio, Discord API
Full-stack & cloud: TypeScript, JavaScript, Node.js, Python, React, Next.js, PostgreSQL, AWS (Lambda, DynamoDB, S3, CloudFront, SES), GitHub Actions CI/CD, Docker

AI & delivery: AI agents, MCP servers, Claude API, OpenAI, prompt engineering; client discovery, requirements, solution design, deployment, maintenance

EDUCATION

BSc Computer Science, University of Calicut, 2017 - 2020 · Full Stack Bootcamp, Brototype, Kochi, Nov 2021 - Jul 2022

Languages: English, Malayalam, Hindi
